

# UTFT

Arduino and chipKit Universal TFT display library

## Manual

## PREFACE:

This library is the continuation of my ITDB02\_Graph, ITDB02\_Graph16 and RGB\_GLCD libraries for Arduino and chipKit. As the number of supported display modules and controllers started to increase I felt it was time to make a single, universal library as it will be much easier to maintain in the future.

Basic functionality of this library was originally based on the demo-code provided by ITead studio (for the ITDB02 modules) and NKC Electronics (for the RGB GLCD module/shield).

This library supports a number of 8bit, 16bit and serial graphic displays, and will work with both Arduino and chipKit boards. For a full list of tested display modules and controllers, see the document [UTFT\\_Supported\\_display\\_modules\\_&\\_controllers.pdf](#).

When using 8bit and 16bit display modules there are some requirements you must adhere to. These requirements can be found in the document [UTFT\\_Requirements.pdf](#). There are no special requirements when using serial displays.

You can always find the latest version of the library at <http://electronics.henningkarlsen.com/>

If you make any modifications or improvements to the code, I would appreciate that you share the code with me so that I might include it in the next release. I can be contacted through <http://electronics.henningkarlsen.com/contact.php>.

For version information, please refer to [version.txt](#).

Since most people have only one or possibly two different display modules a lot of memory has been wasted to keep support for many unneeded controller chips. As of v1.1 you now have the option to easily remove this unneeded code from the library. By disabling the controllers you don't need you can reduce the memory footprint of the library by several Kb. For more information, please refer to [memorysaver.h](#).

If you are using the "AquaLEDSources All in One Super Screw Shield" on a chipKit Max32, please read the comment in [HW\\_PIC32\\_defines.h](#)

8 bit display shields designed for use on Arduino Uno (and similarly sized boards) can now be used on Arduino Megas. Please read the comment in [HW\\_AVR\\_defines.h](#)

## DISPLAY ORIENTATION:

This library is licensed under a [CC BY-NC-SA 3.0](#) (Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported) License.

For more information see: <http://creativecommons.org/licenses/by-nc-sa/3.0/>

## DEFINED LITERALS:

Alignment

For use with print(), printNumI() and printNumF()

LEFT: 0  
RIGHT: 9999  
CENTER: 9998

Orientation

For use with InitLCD()

PORTRAIT: 0  
LANDSCAPE: 1

VGA Colors

Predefined colors for use with setColor() and setBackColor()

VGA_BLACK	VGA_SILVER	VGA_GRAY	VGA_WHITE
VGA_MAROON	VGA_RED	VGA_PURPLE	VGA_FUCHSIA
VGA_GREEN	VGA_LIME	VGA_OLIVE	VGA_YELLOW
VGA_NAVY	VGA_BLUE	VGA_TEAL	VGA_AQUA

Display model

For use with UTFT()

Please see [UTFT\\_Supported\\_display\\_modules\\_&\\_controllers.pdf](#)

## INCLUDED FONTS:

SmallFont

Character size: 8x12 pixels Number of characters: 95

BigFont

Character size: 16x16 pixels Number of characters: 95

SevenSegNumFont

Character size: 32x50 pixels Number of characters: 10

## FUNCTIONS:

### UTFT(Model, RS, WR, CS, RST[, ALE]);

The main class constructor when using 8bit or 16bit display modules.

Parameters:      Model:    See the separate document for the supported display modules  
                  RS:        Pin for Register Select  
                  WR:        Pin for Write  
                  CS:        Pin for Chip Select  
                  RST:       Pin for Reset  
                  ALE:       **<optional>** Only used for latched 16bit shields  
                                 Pin for Latch signal

Usage:            UTFT myGLCD(ITDB32S,19,18,17,16); // Start an instance of the UTFT class

### UTFT(Model, SDA, SCL, CS, RST[, RS]);

The main class constructor when using serial display modules.

Parameters:      Model:    See the separate document for the supported display modules  
                  SDA:       Pin for Serial Data  
                  SCL:       Pin for Serial Clock  
                  CS:        Pin for Chip Select  
                  RST:       Pin for Reset  
                  RS:        **<optional>** Only used for 5pin serial modules  
                                 Pin for Register Select

Usage:            UTFT myGLCD(ITDB18SP,11,10,9,12,8); // Start an instance of the UTFT class

### InitLCD([orientation]);

Initialize the LCD and set display orientation.

Parameters:      Orientation: **<optional>**  
                                 PORTRAIT  
                                 LANDSCAPE (default)

Usage:            myGLCD.initLCD(); // Initialize the display

Notes:            This will reset color to white with black background. Selected font will be reset to *none*.

### getDisplayXSize();

Get the width of the screen in the current orientation.

Parameters:      None  
Returns:          Width of the screen in the current orientation in pixels  
Usage:            Xsize = myGLCD.getDisplayXSize(); // Get the width

### getDisplayYSize();

Get the height of the screen in the current orientation.

Parameters:      None  
Returns:          Height of the screen in the current orientation in pixels  
Usage:            Ysize = myGLCD.getDisplayYSize(); // Get the height

### lcdOff();

Turn off the LCD. No commands will be executed until a lcdOn(); is sent.

Parameters:      None  
Usage:            myGLCD.lcdOff(); // Turn off the lcd  
Notes:            This function is currently only supported on PCF8833-based displays

### lcdOn();

Turn on the LCD after issuing a lcdOff()-command.

Parameters:      None  
Usage:            myGLCD.lcdOn(); // Turn on the lcd  
Notes:            This function is currently only supported on PCF8833-based displays

### setContrast(c);

Set the contrast of the display.

Parameters:      c: Contrast-level (0-64)  
Usage:            myGLCD.setContrast(64); // Set contrast to full (default)  
Notes:            This function is currently only supported on PCF8833-based displays

<b>clrScr();</b>	
Clear the screen. The background-color will be set to black.	
Parameters:	None
Usage:	myGLCD.clrScr(); // Clear the screen

<b>fillScr(r, g, b);</b>	
Fill the screen with a specified color.	
Parameters:	r: Red component of an RGB value (0-255) g: Green component of an RGB value (0-255) b: Blue component of an RGB value (0-255)
Usage:	myGLCD.fillScr(255,127,0); // Fill the screen with orange

<b>fillScr(color);</b>	
Fill the screen with a specified pre-calculated RGB565 color.	
Parameters:	color: RGB565 color value
Usage:	myGLCD.fillScr(VGA_RED); // Fill the screen with red

<b>setColor(r, g, b);</b>	
Set the color to use for all draw*, fill* and print commands.	
Parameters:	r: Red component of an RGB value (0-255) g: Green component of an RGB value (0-255) b: Blue component of an RGB value (0-255)
Usage:	myGLCD.setColor(0,255,255); // Set the color to cyan

<b>setColor(color);</b>	
Set the specified pre-calculated RGB565 color to use for all draw*, fill* and print commands.	
Parameters:	color: RGB565 color value
Usage:	myGLCD.setColor(VGA_AQUA); // Set the color to aqua

<b>getColor();</b>	
Get the currently selected color.	
Parameters:	None
Returns:	Currently selected color as a RGB565 value (word)
Usage:	Color = myGLCD.getColor(); // Get the current color

<b>setBackColor(r, g, b);</b>	
Set the background color to use for all print commands.	
Parameters:	r: Red component of an RGB value (0-255) g: Green component of an RGB value (0-255) b: Blue component of an RGB value (0-255)
Usage:	myGLCD.setBackColor(255,255,255); // Set the background color to white

<b>setBackColor(color);</b>	
Set the specified pre-calculated RGB565 background color to use for all print commands.	
Parameters:	color: RGB565 color value
Usage:	myGLCD.setBackColor(VGA_LIME); // Set the background color to lime

<b>getBackColor();</b>	
Get the currently selected background color.	
Parameters:	None
Returns:	Currently selected background color as a RGB565 value (word)
Usage:	BackColor = myGLCD.getBackColor(); // Get the current background color

<b>drawPixel(x, y);</b>	
Draw a single pixel.	
Parameters:	x: x-coordinate of the pixel y: y-coordinate of the pixel
Usage:	myGLCD.drawPixel(119,159); // Draw a single pixel

<b>drawLine(x1, y1, x2, y2);</b>	
Draw a line between two points.	
Parameters:	x1: x-coordinate of the start-point y1: y-coordinate of the start-point x2: x-coordinate of the end-point y2: y-coordinate of the end-point
Usage:	myGLCD.drawLine(0,0,239,319); // Draw a diagonal line

<b>drawRect(x1, y1, x2, y2);</b>	
Draw a rectangle between two points.	
Parameters:	x1: x-coordinate of the start-corner y1: y-coordinate of the start-corner x2: x-coordinate of the end-corner y2: y-coordinate of the end-corner
Usage:	myGLCD.drawRect(119,159,239,319); // Draw a rectangle

<b>drawRoundRect(x1, y1, x2, y2);</b>	
Draw a rectangle with slightly rounded corners between two points. The minimum size is 5 pixels in both directions. If a smaller size is requested the rectangle will not be drawn.	
Parameters:	x1: x-coordinate of the start-corner y1: y-coordinate of the start-corner x2: x-coordinate of the end-corner y2: y-coordinate of the end-corner
Usage:	myGLCD.drawRoundRect(0,0,119,159); // Draw a rounded rectangle

<b>fillRect(x1, y1, x2, y2);</b>	
Draw a filled rectangle between two points.	
Parameters:	x1: x-coordinate of the start-corner y1: y-coordinate of the start-corner x2: x-coordinate of the end-corner y2: y-coordinate of the end-corner
Usage:	myGLCD.fillRect(119,0,239,159); // Draw a filled rectangle

<b>fillRoundRect(x1, y1, x2, y2);</b>	
Draw a filled rectangle with slightly rounded corners between two points. The minimum size is 5 pixels in both directions. If a smaller size is requested the rectangle will not be drawn.	
Parameters:	x1: x-coordinate of the start-corner y1: y-coordinate of the start-corner x2: x-coordinate of the end-corner y2: y-coordinate of the end-corner
Usage:	myGLCD.fillRoundRect(0,159,119,319); // Draw a filled, rounded rectangle

<b>drawCircle(x, y, radius);</b>	
Draw a circle with a specified radius.	
Parameters:	x: x-coordinate of the center of the circle y: y-coordinate of the center of the circle radius: radius of the circle in pixels
Usage:	myGLCD.drawCircle(119,159,20); // Draw a circle with a radius of 20 pixels

<b>fillCircle(x, y, radius);</b>	
Draw a filled circle with a specified radius.	
Parameters:	x: x-coordinate of the center of the circle y: y-coordinate of the center of the circle radius: radius of the circle in pixels
Usage:	myGLCD.fillCircle(119,159,10); // Draw a filled circle with a radius of 10 pixels

#### **print(st, x, y[, deg]);**

Print a string at the specified coordinates. An optional background color can be specified. Default background is black. You can use the literals LEFT, CENTER and RIGHT as the x-coordinate to align the string on the screen.

Parameters:     st:    the string to print  
                  x:    x-coordinate of the upper, left corner of the first character  
                  y:    y-coordinate of the upper, left corner of the first character  
                  deg: <optional>  
                         Degrees to rotate text (0-359). Text will be rotated around the upper left corner.

Usage:           myGLCD.print("Hello, World!",CENTER,0); // Print "Hello, World!"

Notes:           CENTER and RIGHT will not calculate the coordinates correctly when rotating text.  
                  The string can be either a char array or a String object

#### **printNumI(num, x, y[, length[, filler]]);**

Print an integer number at the specified coordinates. An optional background color can be specified. Default background is black. You can use the literals LEFT, CENTER and RIGHT as the x-coordinate to align the string on the screen.

Parameters:     num:    the value to print (-2,147,483,648 to 2,147,483,647) *INTEGERS ONLY*  
                  x:    x-coordinate of the upper, left corner of the first digit/sign  
                  y:    y-coordinate of the upper, left corner of the first digit/sign  
                  length: <optional>  
                         minimum number of digits/characters (including sign) to display  
                  filler: <optional>  
                         filler character to use to get the minimum length. The character will be inserted in front of the number, but after the sign. Default is ' ' (space).

Usage:           myGLCD.printNumI(num,CENTER,0); // Print the value of "num"

#### **printNumF(num, dec, x, y[, divider[, length[, filler]]]);**

Print a floating-point number at the specified coordinates. An optional background color can be specified. Default background is black.

You can use the literals LEFT, CENTER and RIGHT as the x-coordinate to align the string on the screen.

**WARNING:** Floating point numbers are not exact, and may yield strange results when compared. Use at your own discretion.

Parameters:     num:    the value to print (See note)  
                  dec:    digits in the fractional part (1-5) *0 is not supported. Use printNumI() instead.*  
                  x:    x-coordinate of the upper, left corner of the first digit/sign  
                  y:    y-coordinate of the upper, left corner of the first digit/sign  
                  divider: <Optional>  
                         Single character to use as decimal point. Default is '.'  
                  length: <optional>  
                         minimum number of digits/characters (including sign) to display  
                  filler: <optional>  
                         filler character to use to get the minimum length. The character will be inserted in front of the number, but after the sign. Default is ' ' (space).

Usage:           myGLCD.printNumF(num, 3, CENTER,0); // Print the value of "num" with 3 fractional digits

Notes:           Supported range depends on the number of fractional digits used.  
                  Approx range is +/- 2\*(10<sup>9-dec</sup>)

#### **setFont(fontname);**

Select font to use with print(), printNumI() and printNumF().

Parameters:     fontname: Name of the array containing the font you wish to use

Usage:           myGLCD.setFont(BigFont); // Select the font called BigFont

Notes:           You must declare the font-array as an external or include it in your sketch.

#### **getFont();**

Get the currently selected font.

Parameters:     None

Returns:          Currently selected font

Usage:           CurrentFont = myGLCD.getFont(); // Get the current font

#### **getFontXsize();**

Get the width of the currently selected font.

Parameters:     None

Returns:          Width of the currently selected font in pixels

Usage:           Xsize = myGLCD.getFontXsize (); // Get font width

#### **getFontYsize();**

Get the height of the currently selected font.

Parameters:     None

Returns:          Height of the currently selected font in pixels

Usage:           Ysize = myGLCD.getFontYsize (); // Get font height

<b>drawBitmap (x, y, sx, sy, data[, scale]);</b>	
Draw a bitmap on the screen.	
Parameters:	x: x-coordinate of the upper, left corner of the bitmap y: y-coordinate of the upper, left corner of the bitmap sx: width of the bitmap in pixels sy: height of the bitmap in pixels data: array containing the bitmap-data scale: <b>&lt;optional&gt;</b> Scaling factor. Each pixel in the bitmap will be drawn as <scale>x<scale> pixels on screen.
Usage:	myGLCD.drawBitmap(0, 0, 32, 32, bitmap); // Draw a 32x32 pixel bitmap
Notes:	You can use the online-tool "ImageConverter 565" or "ImageConverter565.exe" in the Tools-folder to convert pictures into compatible arrays. The online-tool can be found on my website. Requires that you #include <avr/pgmspace.h> when using an Arduino other than Arduino Due.

<b>drawBitmap (x, y, sx, sy, data, deg, rox, roy);</b>	
Draw a bitmap on the screen with rotation.	
Parameters:	x: x-coordinate of the upper, left corner of the bitmap y: y-coordinate of the upper, left corner of the bitmap sx: width of the bitmap in pixels sy: height of the bitmap in pixels data: array containing the bitmap-data deg: Degrees to rotate bitmap (0-359) rox: x-coordinate of the pixel to use as rotational center relative to bitmaps upper left corner roy: y-coordinate of the pixel to use as rotational center relative to bitmaps upper left corner
Usage:	myGLCD.drawBitmap(50, 50, 32, 32, bitmap, 45, 16, 16); // Draw a bitmap rotated 45 degrees around its center
Notes:	You can use the online-tool "ImageConverter 565" or "ImageConverter565.exe" in the Tools-folder to convert pictures into compatible arrays. The online-tool can be found on my website. Requires that you #include <avr/pgmspace.h> when using an Arduino other than Arduino Due.
